## BeMicron® Pro-Tech

Protection against liquids and particles

ESD

Types 5, 6

ISO 3 → 7

The BeMicron Pro-Tech re-usable coverall has EN 13034 and 13982 certification. Its innovative shape with no opening and its design meet the requirements of the standard. This unique gowning solution comes in two versions: integrated or separate hood

Made of a water-repellent fabric carefully selected for its resistance properties to acids, bases and particles, its performance and its long-term reliability. The coverall has a perfectly smooth technical safety lining on front and back, serving as an effective barrier against human contamination and environmental risks. In some sectors, the fabric is used as a stain-proof solution.

Thanks to the BeMicron® folding system and donning procedure, the operator's movements follow each other automatically without need to touch the outside of the coverall and without errors in procedure.

## The doning procedure

1

Out of the bag

2

White = left  
Red = right

3

Easy gowning  
system

4

Easely  
adjustable

5

Zipper quickly  
closed

30 sec

## BeMicron<sup>®</sup> Pro-Tech

### A hood that fits perfectly

Adjustable both vertically and horizontally with studs, the hood completely encloses the head, providing full protection with excellent comfort.

### Certified, it fits all the requirements

The pictograms clearly visible on the sleeve offer direct information on the protection provided. The coverall is suitable for all clean rooms, but the protection it provides also clearly represents a solution for a variety of other sectors.

### Durable and effective cuff

The cuff or stud finish allows the sleeves to fit perfectly into gloves. The cuff is made of antistatic polyester and is resistant to various sterilization processes. The studs are made of stainless steel.

### Protective clothing with optimum comfort

The elastic in the back ensures the BeMicron adjusts perfectly to the body to prevent any «blow-up effect» caused by movements in the body.

### Gowning without touching the coverall

The BeMicron is unique in the fact that the outside of the garment is protected from any risk of contact contamination (hand and surface). The base of the zip is already engaged and in place reducing contact time.. Simply use the grip to close the zip.

### Boots fixed to the legs of the coverall

Studs on the coverall's leg allow boots to be fixed in a fully protective way. We also supply boots with anti-slip soles which are resistant to the various sterilization cycles. The boots conform to standard EN 344 because of their antistatic qualities.
